# Summary of FM targets folded by Zhang group

Fragment assembly-based

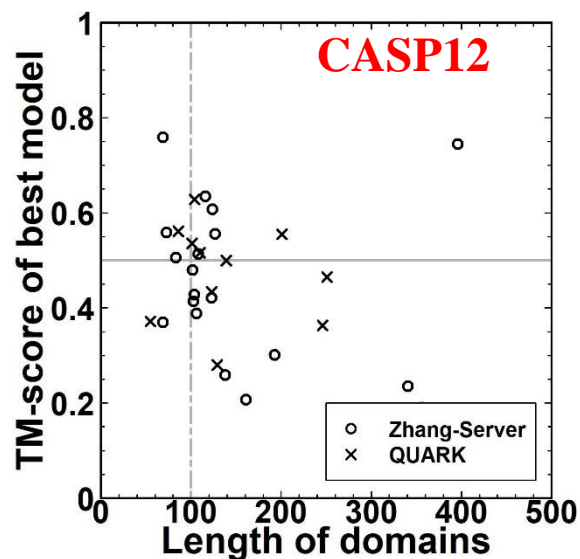

Direct coupling analysis-based  
contacts added

Deep-learning-based  
contacts added

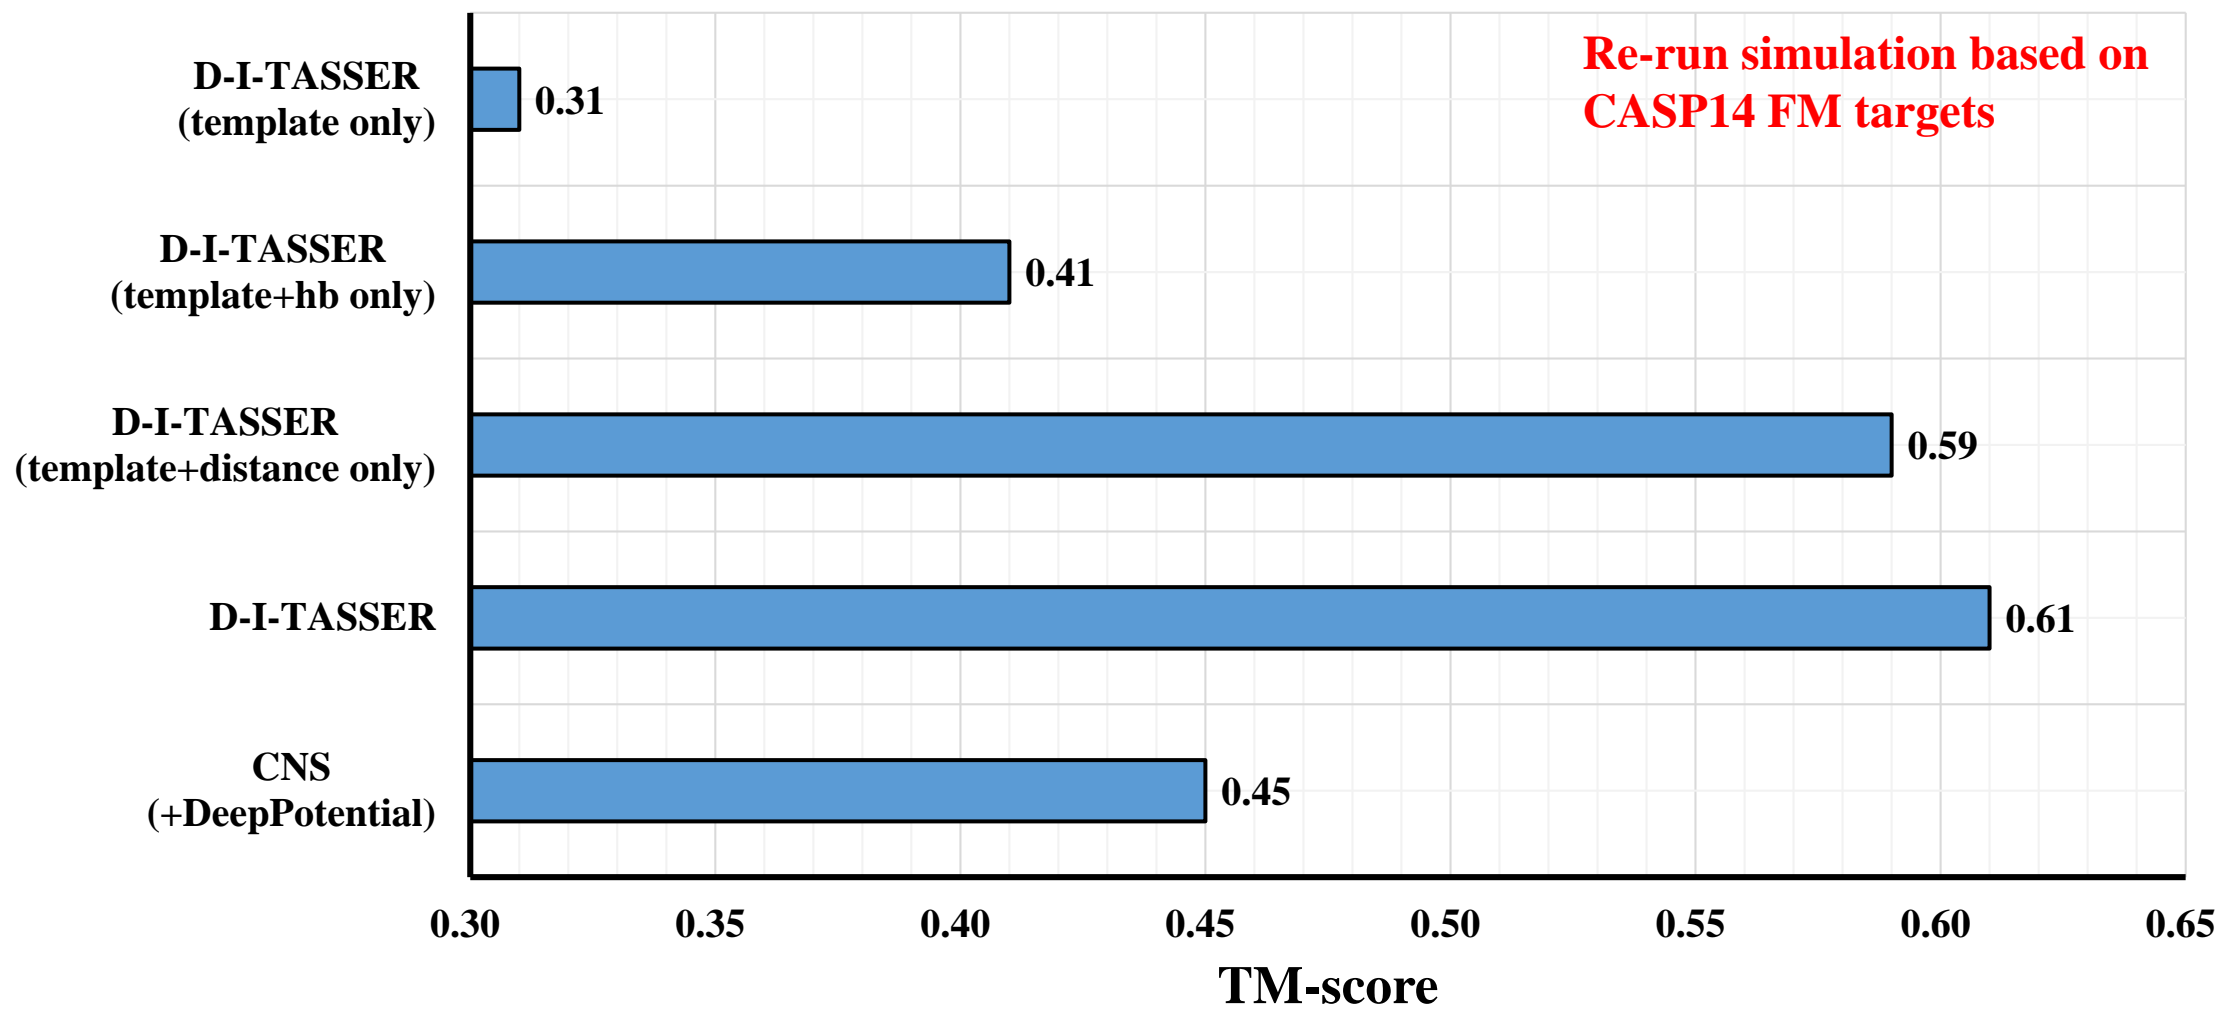

Deep-learning-based  
distances added

23 FM targets and 14 FM/TBM targets are classified as “FM” targets in the following analysis

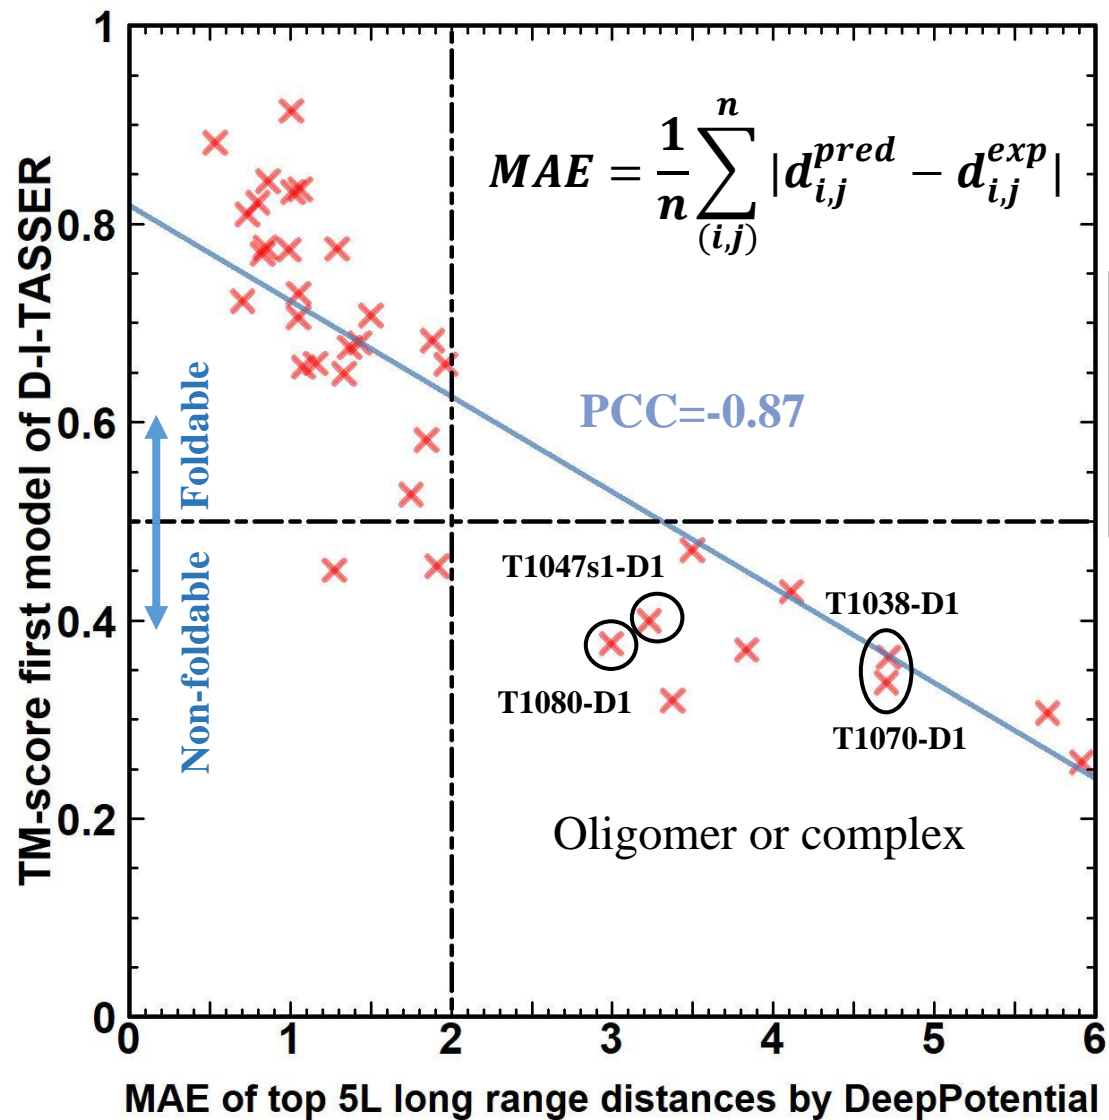

76% targets are foldable based on best server models from Zhang group in CASP14

# Impact of different energy components on D-I-TASSER for FM targets

# Summary

- **What works**

- Distance and hydrogen-bond prediction by DeepPotential
- Advanced structure assembly simulations by I-TASSER/QUARK
- DeepMSA2 for deeper MSA generation

- **What needs to be improved**

- Modeling oligomers
- Selecting good MSA
- Partitioning domains
